

This website is about the living waters we cherish and enjoy every day. It is also about the many forms of water we experience in our lives. And it is about keeping those waters safe, healthy and attractive assets for cities and towns across Massachusetts.

We rarely pause to consider that most water we see is **alive**. An amazing complexity of life creates the common aquatic ecosystems that contribute so richly to the health of water supplies, lakes, ponds, brooks and rivers.

Our communities celebrate and esteem the many beneficial uses of water for bathing, drinking, swimming, boating, fishing, beverages, industry, and a host of other essential purposes.

A home without water is untenable. A stream without water is lifeless. We share water resources with a myriad of creatures, and what we do with water greatly affects the quality and health of our neighborhoods, our cities and towns, our government, our society.

Nearly all life relies on the water cycle – water vapor is released into the air by plants and sunlight, then condenses into clouds, and when too heavy for the air to suspend, rain and snow return the water to the land. Through perpetual renewal, water is cleansed and collected in waterways that flow ever downward to the vast oceans that teem with life.

With the help of the State of Michigan, the City of Detroit, and the Detroit River Water Tunnel Authority, the City of Detroit is working to protect the Detroit River and its water quality.
